Presentation Evaluation.

# Consumption of Pt anode in perchloric acid

Times New Roman 16pt bold

H. Fujimoto, H. Minoshima, S. Mitsushima, K. Ota, N. Kamiya

Times New Roman 10.5pt

*Department of Energy & Safety Engineering, Yokohama National University*

*Times New Roman 10.5pt italic*

Platinum is one of the most widely used electrode materials from the viewpoint of the high corrosion-resistance and the high level of catalyst ability. However, if the platinum is used as an oxygen-generating anode for long time period, the accumulated consumption becomes large

Times New Roman 10.5pt

【Abstract in 100 words, justified】

## 1. Introduction

Section Title – Times New Roman 10.5pt bold

.....  
.....<sup>1)</sup>

Proceeding text – Times New Roman 10.5pt

## 2. Experimental

2.1 .....

Subsection Title – Times New Roman 10.5pt bold

.....  
.....

2.2 .....

.....  
.....

## 3. Results and Discussions

.....  
.....

### Notes on Proceeding Submission Process

1. Follow this proceeding format.
2. You need the following information:
  - Proceeding title
  - Corresponding author information – Full name, affiliation and address.
  - Co-author information – Full names, affiliations and addresses for all co-authors.
  - Proceeding text – A maximum of 2 pages (approx.. 750 words) is allowed.
3. After making the proceeding, change it to PDF format. Make sure:
  - Do NOT set any securities.
  - Check whether all the figure images are clearly shown.
4. You may include figures in colors.
5. Send the proceeding PDF file to the following email address:  
denkai@electrochem.jp
